

Cut Your Milk Losses in Half!

Measure it, Report it, and Control your Milk Loss

Vigilistics is a leader in measuring and managing Dairy Plant operations. Automatic, real-time measurements of your process are displayed for operator and management feedback and control. The system reconciles losses and imbalances, and provides a foundation for continuous process improvement. Leading plants are achieving milk loss levels of below 0.75%.

Transform the way your business uses manufacturing information

Proven Solution with Dramatic Results and Profitability

Vigilistics is deployed in fluid milk and cheese plants across the U.S., with impressive results:

- The system installs with major PLC's in weeks
- Positive operating results within 90 days
- Product losses can be cut in half
- Operating variances are dramatically reduced, and improvements are proven sustainable
- Plants can realize >300% annual rate of return!

These impressive results are a product of a deep understanding of the modern dairy processing plant, and the smart application of intuitive reporting.

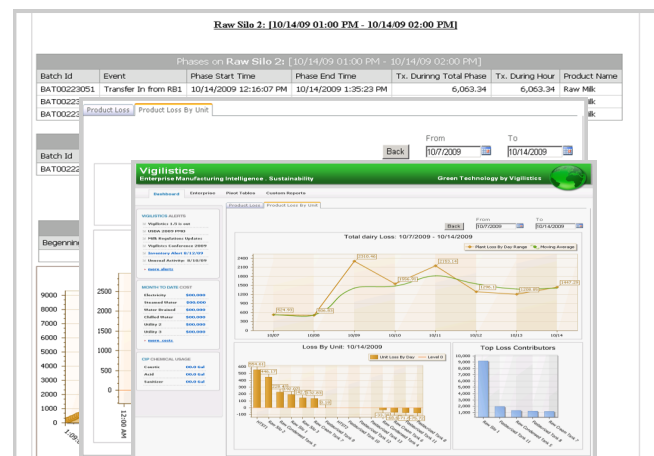

Enterprise Manufacturing Intelligence

by Vigilistics

Real-time Information where and when you want it!

Operating data is collected directly from the plant floor, in real-time, and is available to operators and management through standard web interfaces. Reports and alerts can also be delivered to your favorite smart phone.

Review reconciliations for product loss in receiving, mixing, and pasteurization. Drill down to see the equipment and operators that are involved in significant loss events. At a glance the cause of the product loss is revealed, and a few clicks allow you to pinpoint areas for program change or operator retraining.

CIP Performance and Compliance

The Vigilistics solution is comprehensive, and is also used to manage performance of CIP systems, and to realize automatic paperless compliance with 2009 PMO and 21 CFR part 11 regulations. In addition, Vigilistics can generate traceability reports, to enable fast and focused response to product recall events. Vigilistics tracks product ID, genealogy, and lot details you need when facing a product recall.

Industry leaders choose Vigilistics

Vigilistics is a leader in providing real time business intelligence solutions to dairy processing plants. It's patented vEMI Application Suite combines powerful analytical tools with intuitive graphics, and a smart architecture that installs quickly with existing plant controllers. The vEMI suite includes Product Loss Management, CIP, Equipment Efficiency, Variable Cost Management, and Traceability. Vigilistics, and Vigilistics vEMI are trademarks of Vigilistics Corp.
